ADVANTAGE
SOFTWARE

Globally recognized as the world's leading transcript production software, Eclipse by Advantage Software has earned the trust of thousands of reporters worldwide. Now Eclipse RSR brings the unmatched power of Eclipse to digital reporting, dramatically increasing throughput.

INSTANT EDITABLE REALTIME

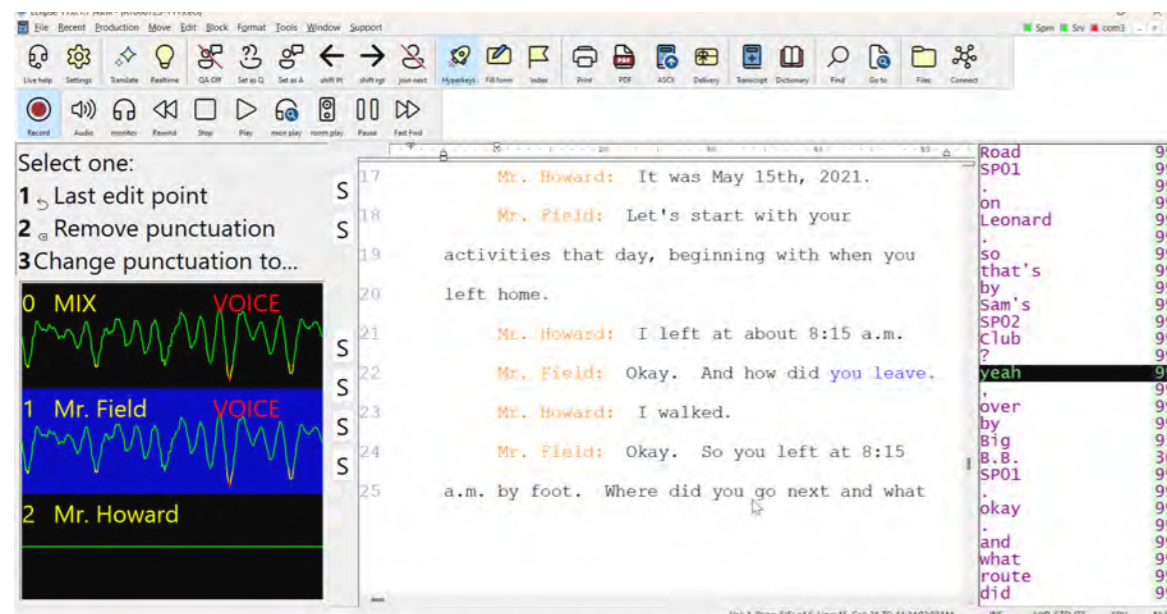

With Eclipse RSR, skilled digital reporters can send high-quality realtime text to judges, attorneys, and litigants. Team Editing™ allows multiple people to work on the same job simultaneously. Enhance the realtime experience with the option to discreetly conceal reporter notes and annotations, for a sleeker appearance. Our optional Bridge Broadcaster™ software instantly updates client computers in realtime with edited text.

NO INTERNET REQUIRED

Eclipse RSR uses Speechmatics, the most accurate and inclusive speech-to-text program ever developed, significantly reducing speech recognition errors across accents, dialects, and other sociodemographic factors. With Speechmatics on your computer, delays are eliminated and security is improved.

SHIFT PRODUCTIVITY INTO HIGH GEAR

Eclipse RSR is loaded with breakthrough features to increase accuracy, improve clarity, and save editing time. Selective audio mixing boosts recognition by letting you mute unnecessary channels while preserving masked data. Speaker diarization, colloquy mode, Q/A mode, by-lines, and punctuation are processed automatically. Hyperkey keyboard shortcuts and hundreds of specialized editing functions save innumerable keystrokes, while job dictionary support improves the accuracy of first drafts and realtime.

CONNECT AND COLLABORATE LIKE NEVER BEFORE

Eclipse RSR is compatible with all Advantage Software products, providing access to a large pool of professionals skilled in transcript production, and facilitating collaboration regardless of input method. Fully-integrated Connectify software works with or without the Internet for easy connection with clients locally or worldwide.

HIGHLIGHTS

- Up to 16 Channels with Selective Audio Mixing Preserves "Muted" Channels. (turn unused channels off to reduce noise while preserving them as backup.)
